# Experiment 8: Simple application using Servlet

Aim: To make a simple application using Servlet.

Implementation:

Output:

Code:

```java
import java.io.*;
import javax.servlet.*;

public class Introduction implements Servlet {

	@Override
	public void destroy() {
		// TODO Auto-generated method stub
		System.out.println("Inside destroy...");
	}

	@Override
	public ServletConfig getServletConfig() {
		// TODO Auto-generated method stub
		return null;
	}

	@Override
	public String getServletInfo() {
		// TODO Auto-generated method stub
		return null;
	}
@Override
	public void init(ServletConfig arg0) throws ServletException {
		// TODO Auto-generated method stub
		System.out.println("Inside init..");

	}@Override
```

```
        public void service(ServletRequest req,ServletResponse res) throws
ServletException, IOException {
            // TODO Auto-generated method stub
            System.out.println("Inside service...");
            res.setContentType("text/html");
            PrintWriter out=res.getWriter();
            out.print("<html><body>");
            out.print("<b>This is my servlet program <br></b>");
            out.print("<b>Servlet</b>"); out.print("</body></html>");}}
```
Result: The experiment was successfully completed.
